CONCESSION TRAILERS

BUILT FOR THE LONG HAUL

MERCHANDISING, FOOD & BEVERAGE VENDING, AND GAME TRAILERS

YOUR SATISFACTION IS OUR BUSINESS.

At United Trailers, our goal is to make sure that you are completely satisfied with your concession trailer. We take the time to listen to your needs, and then build the trailer to your specifications. For over 20 years, we have been building custom trailers with premium materials and solid construction. Your options are almost limitless with our long list of available accessories, along with various sink packages and window configurations. Experience the United Trailers difference today!

SOLID CONSTRUCTION

1 The rear corner posts and header are made of quality steel to provide a solid framework.

2 An extra wallpost is added to the front and rear of each wheel area to provide added support for the wall.

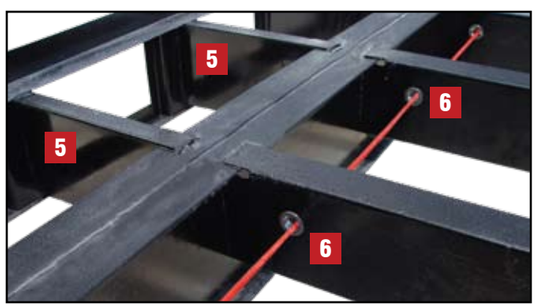
3 Rubber torsion axles with E-Z Lube hubs are standard. All models with over 3,000 lb. GVWR ratings come with electric brakes.

4 Trailer-rated radial tires and axles provide maximum performance and safety.

5 Heavy-duty steel square outriggers are welded to the outer wall for added stability and strength.

6 Where the wiring passes through steel, grommets are used to prevent electrical shorts.

7 The lower section of every trailer is sprayed with a special protective undercoating.



8 Each trailer has a special barrier to minimize corrosion from electrolysis. All exterior sheet metal screws are warrantied for 5 years against corrosion.

9 A 6″ tubular steel tongue is standard. A third member is added on:
A. Trailers with a GVWR of 9,900 lbs. or more
B. Trailers with an extended tongue
C. Trailers with a pintle eye coupler

10 Steel cross-members run between the I-beams to support the floor. Spacing is determined by the information you provide the dealer. 24″ spacing is standard on round top models and 16″ is standard on flat top models.

11 All walk-in door framing is 1″ x 3″ rectangular channel for a straighter perimeter.

12 Two heavy-duty steel I-beams provide a solid foundation for your trailer. On trailers with 5200 lb. axles or that are 20´ and longer, 2 additional I-beams are added to 60% of the trailer length.

13 Steel top rails are used to frame a stronger, straighter roof line.

14 Steel roof bows and steel wall studs provide solid upright support.
